

ABSTRACT

This research was developed by the research of Suharli (2006) and Herawaty (2002). There are two different with the previous research, such as : 1) Value of the Firm was proxy by *Price Earning Ratio (PER)*, Profitability was proxy by *Return on Assets (ROA)*, 2) used the population at a mining company which listed on the Indonesian Stock Exchange from 2003 to 2007 period.

The objective of the empirical study is to examine the role of Institutional Ownership, Profitability, Size Firm, and Independent Commissioner to the value of the firm. The research used a mining company as a object who listed on BEI 2003-2007 period and used purposive sampling method. Used Multiple Regression to examine the hypothesis with SPSS 17.

The results give the evidence that *the Variables of Institutional Ownership positive impact to Value of the Firm but not significant, Size Firm and Independent Commissioner that have a positive significant to Value of the Firm , Profitability* have a negative and significant impact to Value of the Firm.

Keywords: Institutional Ownership, Profitability, Size Firm, Independent Commissioner and *Firm Value*.
