

## **ABSTRACT**

*This study aims to determine the effect of the Poverty Rate, Unemployment Rate, and Labor Force Participation Rate on the Human Development Index of DKI Jakarta. This study was conducted to find out whether or not those variables are indeed three factors that played an important role in encouraging DKI Jakarta to have the highest Human Development Index among 33 other provinces in Indonesia.*

*This study used panel data from 6 administrative districts and cities in DKI Jakarta during 2010-2021 using Random Effect panel regression model. The results showed that there was a significant negative effect from Poverty Rate and Open Unemployment Rate to Human Development Index. Meanwhile, Labor Force Participation Rate has a significant positive effect on Human Development Index of DKI Jakarta during 2010-2021. According to F-statistic, it showed that Human Development Index simultaneously affected by Poverty Rate, Open Unemployment Rate, and Labor Force Participation Rate within 60% R-squared. This study is specifically highlighting economics and employment in DKI Jakarta as two aspects with the most programs and policies applied of.*

*Keywords: Human Development Index (HDI), Poverty Rate, Unemployment Rate, Labor Force Participation Rate*
