

ABSTRACT

The Covid-19 pandemic is still endemic in various parts of the world and has had an impact on the economic and financial sectors in Indonesia. The existence of covid pandemic has an impact on the decline of business and business activities, especially the Sharia People's Financing Bank (BPRS). The perceived decrease is in the ability to pay installments that impacted in the reduced liquidity of BPRS. Bank Indonesia is expected to be able to identify problems in early by carrying out faster follow-up improvements by implementing Good Corporate Governance and good risk management so that banks are more resilient in dealing with crises using the RGEC method.

This research uses qualitative methods by means of data collection and observation. The population in this study was 25 data and have 7 samples that already fit the criteria. Data processing using microsoft excel.

The results of this study in the calculation of RGEC can be said that the Islamic People's Financing Bank (BPRS) during the pandemic is very healthy.
