

## **ABSTRACT**

*This study aims to examine the effect of board size, board with female directors, and board ownership as an independent variable to firm's sustainability reporting as a dependent variable.*

*The population in this study is 100 companies in Indonesia that are listed on Bursa Efek Indonesia in the year 2014-2017. The method used for sampling is proportional stratified sampling. Yielding a final sample of 400 firm-year observations. This study used logistic regression to examine the hypothesis.*

*The result of this study shows that board size positively affecting firm's sustainability reporting. Board with female directors shows a negative effect to firm's sustainability reporting. While, board ownership does not show any significant effect to firm's sustainability reporting.*

*Keywords: board size, board with female directors, board ownership, firm sustainability reporting*
