

## **ABSTRACT**

*The aim of this study is to examine the influence of corporate governance on the company's performance. Tobin's q and Return on Asset (ROA) are used to represent the company's performance. The Independent variables are managerial ownership, board commissioner meeting frequency, independent of audit committee, and board commissioner size.*

*Research data is secondary data from annual reports agricultural sector firms listed on Indonesia Stock Exchange in 2013-2015. The purposive sampling is used to obtain samples. The simple regression is used to analyze the hypotheses.*

*The results with Tobin's q as proxy indicates that board commissioner size has a positive influence on the company's performance. While managerial ownership, board commissioner meeting frequency, and independent of audit committee have no influence on the company's performance. The other results with ROA as proxy indicate that board commissioner meeting frequency and board commissioner size have a negative influence on the company's performance. While managerial ownership and independent of audit committee have no influence on the company's performance.*
