

ABSTRACT

The Bank as a financial intermediary institution distributes funds from third parties (depositors) to the needy ie the debtor. It is therefore important for banks to raise third party funds and distribute them to debtors through credit. So far, third party funding in Central Java Province has been relatively low and there has never been any research on factors affecting third party funds in commercial banks in Central Java Province.

The purpose of this study is to analyze the influence of GRDP percapita, Interest Rate, and Inflation on third party fund accumulation in Commercial Banks in Central Java Province. Analyzer used is multiple regression with semi regression log form.

The result of the analysis shows that GRDP percapita and interest rate influence positive to third party fund accumulation in public banks in Central Java Province, while inflation not significantly influence third party fund accumulation in commercial banks in Central Java Province.
