

ABSTRACT

This study aimed to examine the effect of interest rates, the level of profit sharing mudaraba deposits, liquidity, inflation and the size of the company on the growth of mudaraba deposits at Islamic banking. Data taken from statistical reports of Islamic banking at Bank Indonesia from January 2009 to May.

2012. The method used is the method of multiple linear regression. Using this method along with the underlying assumptions. The results showed that the rate of profit sharing mudaraba deposits and the size of the company's positive influence, and interest rates negatively affect mudharabah 1 month deposit growth of Islamic banks. While the level of liquidity and inflation showed no effect on mudaraba 1 month deposit growth of Islamic banks. The implications of this study should further improve the management of Islamic banks performance and work together with the Indonesian Ulema Council to provide wider dissemination of the prohibition of bank interest, so that customers of Islamic banks, are not interested with high interest rates offered by conventional banks. Future studies are expected to use the time series data that is longer, add another independent variable, researching funding third parties other than mudaraba deposits.
