

## **ABSTRACT**

*Economic development is a process that led to the increase in income per capita of the population of a country in the long term ( Sukirno , 1985) . Development planning in Indonesia is directed to create a society that is more prosperous , prosperous and equitable . Development policy is mainly done to achieve high economic growth by utilizing the potential and existing resources . Indicators of the success of economic development of a country can be seen from the economic growth accompanied by low income inequality and the number of workers absorbed .*

*This study aims to analyze and determine the effect of income disparity of income per capita , unemployment and income disparity on the number of poor people in Central Java Province . The method used in this research is quantitative analysis with detection of classical assumptions .*

*These results indicate that the per capita income variable negative effect on the number of poor people , a variable number of unemployed positive effect on the number of poor and unequal distribution of income variables did not affect the number of poor people in Central Java .*

*Keywords : disparity of income , income per capita , the number of unemployed , the number of poor*
