ABSTRACT

Zakah as obligatory dues one issued by all the Muslims have one goal is to help each other. Zakah profession as one form of Zakah is paid by workers can become revenue for the Government to do the same with the aim of development objectives of Zakah. BAZNAS is an institution recognized by the Government to manage the funds of the zakat either in the central level and in the regions. The number of workers in DKI Jakarta is huge so it has the potential for a great earner Zakah profession. But in fact the intake of Zakah in DKI Jakarta is still relatively low due to low interest pay Zakah.

This research aims to analyze the influence of the knowledge of Zakah level of religiosity, income level, the level of trust to the BAZNAS toward the interest of paying Zakah profession on workers in DKI Jakarta. The methods used in this research are multiple linear regression analysis (Ordinary Least Square). All of the variables used are measured using the likert scale.

The results showed that the variable knowledge of Zakah, income level, and the level of trust in BAZNAS has a positive and significant influence towards the interest of paying zakat profession on workers in DKI Jakarta at 5% significance level. The higher knowledge of zakat, income level, and the level of trust in BAZNAS then the higher interest of workers to pay the Zakah profession. The level of trust in BAZNAS became the most influential variables against the interest of paying zakat workers in DKI Jakarta.
