

ABSTRACT

The objectives of this study is to examine the impact of Corporate Social Responsibility, environment and corporate governance structure(public ownership and size of audit commitee) towards financial firm performance. CSR Disclosure is measured by the index. Environment performance is measured by the performance of companies in the PROPER from ministry of environment. Public ownership is measured by percentage of public contribution in a firm. Size of audit Commitee is measured by number of audit commitee member. While firm performance is measured by Return On Equity (ROE).

The sample of this research is companies listed on the Indonesia Stock Exchangeand participated in PROPER in 2008 to 2010, which are 63 firms. The sampling method was purposive sampling. Data analysis method used was multiple regression analysis.

Result of this research indicate that CSR disclosure and public ownership significantly effect on firm performance. However, environment performance and size of audit commitee hasn't effect towards firm performance.

Keywords : CSR, environment performance, public ownership, size of audit commitee, firm performance, ROE
