

## **ABSTRACT**

*National development is concerned with the development of each sector which forms the value added to the economy of a region. Regional economic development through the management of potential and existing resources in each region are able to improve economic growth through Regional Gross Domestic Product. The rate of growth of Regional GDP of West Java is lower if compared to its extraction areas which is Banten Province. Economic growth through GDP is driven by several factors that influence.*

*This research aims to analyses the influence of regional revenue, investment, and labor against Regional GDP of West Java Province. The method used in this research is multiple regression analysis (Ordinary Least Square) with time series data 2010-2013 including cross section data of 27 regency/city of West Java Province.*

*The results indicate that local revenue, investment and labor have positive and significant influence toward Regional GDP of West Java Province. A higher realisation of regional revenue, investment and the number of labor will drive a higher level of Regional GDP in West Java Province.*

*Key Words: Regional GDP, Growth, Regional Revenue, Investments, Labor*
