

## **ABSTRACT**

*The researcher examined the relationship between job stress and job satisfaction among a purposive sample of 65 men and 26 women employees of PT Transindo Surya Sarana Semarang.*

*The primary data was obtained from questionnaires, while the secondary data were obtained by literatures and websites.*

*The data which was collected from the questionnaires is analyzed by using Rank Spearman Correlation and t-test. Correlational analysis revealed a relationship between job stress with job satisfaction within both of men and women employees. On the other hand, the result of t-test shows that there were not a significant differences of role stressors and job satisfaction between men and women.*

*Keyword: Job Stress, Job Satisfaction, Gender.*
