ABSTRACT

Development is the attempt to create public welfare. Therefore, the development should be enjoyed by all people as a form of improvement in physical and spiritual well-being in a fair and equitable. In an effort to achieve this goal, local governments and communities should jointly take the initiative of local development.

The success of development should be measured by parameters which are broader and more strategic which includes all aspects of life both material and non material. Judging from the geographical position Tegal is one city that fall into the region of Central Java province, the implementation of development must be preceded by the selection of priorities and targets that have strategic value and have a positive impact in improving the image of Tegal with relation City facilities and infrastructure Tegal and build economic sectors that have the potential to increase economic growth in the city of Tegal.

The analytical tool used in this research is LQ analysis, shift share and classical typology with the economic growth rate, growth sectors of the economy, the Gross Regional Domestic Product (GDP), economic sectors, components Share, Net component Shift, Shift Differential components, and Proportional Shift as a variable component. Based on the LQ analysis it can be known that Tegal has the potential sector basis, namely (1), sector, Electricity, Gas and Water, (2). Transportation and Communications, (3). Finance, (4). Buildings, and (5). Trade. Based on the shift share analysis that the average value is proportional positive electricity, gas and water, construction, trade, transport and communication sector, financial sector and the services sector. On an average rating of Differential Growth Components (Dr) there are 3 sectors that have a positive value of industry sector, construction sector and trade sector.

Keywords: Economic Growth Rate, Growth Sectors of the Economy, the Gross Regional Domestic Product (GDP), LQ, Shift Share and Typology of Sectoral.
