

ABSTRACT

This study aims to examine and analyze the influence of company size, business risk, asset structure, profitability and sales growth of capital structure.

The population in this study is manufacturing companies listing on the JSE in the period 2006 to 2008. Data were collected through observation method of secondary data. Then do the test methods including classical assumptions, hypothesis testing, the F test and t test, and analysis of the coefficient of determination (R²). To analyze the data using SPSS software version 16.

Based on the results of tests performed can be seen that the variable size of the company's positive influence on the company's capital structure. Business risk does not affect the company's capital structure. Structure of assets has a positive effect on corporate capital structure. Profitability does not affect the capital structure. sales growth has a positive effect on the company's capital structure. While based on the simultaneous test (F test) company size, business risk, asset structure, profitability and sales growth significantly influence the capital structure of manufacturing companies listed on the Indonesia Stock Exchange in 2006-2008.

Keywords: firm size, business risk, asset structure, profitability, sales growth and capital structure
