

ABSTRACT

Economic growth is one indicator of the success of economic development. If economic growth gets better, the country's economy will be more successful. Likewise, poverty, inequality and unemployment are the goals and objectives of economic development. This study aims to determine the conditions of economic growth, poverty, inequality, and unemployment and analyze economic growth, poverty, inequality and unemployment in Indonesia in the period 2011-2017. The data used in this study are secondary data in the form of Gross Regional Domestic Product (GRDP) data, percentage of unemployment, consumer price index, labor force, gini ratio, average length of schooling, capital expenditure, life expectancy, poverty percentage, gross fixed capital formation 33 provinces in Indonesia for the period 2011-2017. Data analysis was used with the Fixed Effect Model (FEM) model which was processed using Eviews 10 software.

The results of this study indicate that not all independent variables used in the study are in accordance with the theory or significant.

Keywords: economic growth, poverty, inequality, unemployment, panel data, and Fixed Effect Model
