

## **ABSTRACT**

*ROA is a measurement of the company's overall ability to generate profits with the total number of assets available in the company reducing sales. The purpose of this study was to examine the relationship between CAR, NPF, FDR, BOPO and bank size on ROA in Islamic commercial banks.*

*This study uses secondary data with a population of 11 Islamic banks registered with the Financial Services Authority in the 2015-2020 period. Purposive sampling method was used in selecting the research sample and 6 Islamic banks were selected as samples in this study. The technique used in this research is multiple regression.*

*The results showed that FDR had a significant positive effect on ROA and BOPO had a significant negative effect on ROA, while CAR, NPF and Size had no significant effect on ROA.*

*Keywords: Return on Assets, Capital Adequacy Ratio, Non-Performing Financing, BOPO, Size*
